MOEEZ AHMAD

Senior React.js / Frontend Software Developer

Johar Town, Lahore | 0311 770 5070 | moeezahmed13@gmail.com | linkedin.com/in/ch-moeez-ahmad

PROFESSIONAL SUMMARY

Senior React.js / Frontend Software Developer with 5+ years of professional experience architecting and delivering production-grade, scalable web applications for international US and UK-based clients. Deep expertise in React.js, Redux / Redux Toolkit, TypeScript, JavaScript (ES6+), Next.js, GraphQL, and RESTful API integration within component-driven, agile engineering environments. Proven track record building robust frontend architectures, reusable component systems, and high-performance SPAs that align with business objectives. Early adopter of AI-assisted development (Cursor AI, Claude Code, GitHub Copilot, Prompt Engineering) to accelerate delivery and maintain high code quality standards. Strong communicator, remote-first professional, and passionate advocate for clean, scalable, and well-documented code.

TECHNICAL SKILLS

Core Frontend: React.js (Hooks, JSX, Virtual DOM), JavaScript (ES6+), TypeScript, HTML5, CSS3

Frameworks: Next.js (SSR, SSG, App Router), React Router, Create React App, Vite

State Management: Redux / Redux Toolkit, Context API, React Query, Zustand

API Integration: RESTful APIs, GraphQL (Apollo Client), Axios, Fetch API, JWT/OAuth, Webhooks

UI Libraries: Tailwind CSS, Material UI, Bootstrap, Styled Components, Shadcn/UI

Performance Optimisation: Code Splitting, Lazy Loading, Memoisation (useMemo/useCallback), Lighthouse

Testing: Jest, React Testing Library, Browser DevTools, Cross-Browser Testing

AI-Assisted Dev: Cursor AI, Claude AI / Claude Code, GitHub Copilot, Vibe Coding, Prompt Engineering, AI Pair Programming

Backend (Supporting): Node.js, Express.js, PHP, MongoDB, MySQL

Tools & Workflow: Git, GitHub, VS Code, Jira, Slack, Figma (handoff), Vercel, Netlify, Shopify

Methodologies: Agile/Scrum, Component-Driven Development, Frontend Architecture, Code Reviews

PROFESSIONAL EXPERIENCE

Senior Frontend Developer — *Buckingham UK — England (Remote)*

June 2026 – Present

- Lead frontend development for a UK-based import-export company, building and maintaining customer-facing web platforms and internal tools using React.js and modern JavaScript.
- Developed and optimised Shopify storefronts and custom theme components, improving UX and conversion flows for the company's e-commerce operations.
- Integrated third-party APIs and e-commerce data pipelines, ensuring reliable product listings, inventory sync, and order management across web channels.
- Applied AI-assisted development workflows (Cursor AI, Claude Code) to accelerate feature delivery, reduce boilerplate, and maintain high code quality standards.
- Collaborated directly with stakeholders to translate business requirements into scalable, responsive frontend solutions.

Senior React.js / Frontend Developer — *Mayfair Technology Partners (MTP) — London (Remote)*

January 2024 – May 2026

- Architected and delivered complex React.js SPAs and Next.js applications for international UK and US-based clients, applying component-driven development, virtual DOM optimisation, and TypeScript strict-mode best practices.
- Designed and built a scalable, reusable React component library (forms, data tables, modals, dashboards) reducing new feature delivery time by 30% across multiple production projects.
- Implemented advanced state management using Redux Toolkit and Context API, ensuring predictable data flow, minimal re-renders, and maintainable store architecture across data-heavy application views.
- Integrated RESTful APIs and GraphQL endpoints using Axios and Apollo Client, handling async data fetching, error boundaries, loading states, and optimistic UI updates.

- Optimised frontend performance via code splitting, React.lazy/Suspense, useMemo/useCallback, and Lighthouse audits — consistently achieving 90+ performance scores on production builds.
- Leveraged AI-assisted (vibe coding) workflows with Cursor AI and Claude Code to scaffold components, refactor legacy code, and accelerate sprint velocity using structured prompt engineering.
- Collaborated with UI/UX designers via Figma handoff and backend engineers in agile sprints, delivering pixel-perfect, responsive interfaces consistently ahead of deadlines.
- Resolved cross-browser compatibility issues across Chrome, Firefox, Safari, and Edge; produced comprehensive component-level documentation for team onboarding and knowledge transfer.

Frontend Developer (React.js) — *Infinite Soft*

June 2022 – December 2023

- Focused exclusively on React.js and TypeScript frontend engineering across multiple client-facing production web applications serving thousands of end users.
- Developed a comprehensive modular React component library following atomic design principles, significantly accelerating feature development cycles across the engineering team.
- Configured and maintained centralised Redux stores and Context API providers for state-heavy applications including real-time dashboards and multi-step form workflows.
- Integrated, tested, and debugged complex REST API endpoints, managing response normalisation, pagination, and error handling within React application layers.
- Ensured fully responsive, mobile-first layouts using HTML5, CSS3, and Tailwind CSS, achieving consistent cross-browser rendering across all target environments.
- Partnered with backend engineering teams for API contract definition, endpoint mapping, and rapid sprint deployments.

WordPress Developer — *Xeffix Technologies*

March 2021 – May 2022

- Designed and customised WordPress themes and plugins adhering to modular coding standards and WordPress Core best practices.
- Implemented security hardening, performance optimisation (caching, image compression), and database tuning across client WordPress properties.
- Handled complete live site migrations, cloud backups, cPanel/WHM server management, and software updates.

KEY PROJECTS

- React.js / Next.js SPA Dashboard (MTP): Built a multi-tenant analytics dashboard with real-time data visualisation, role-based access control (RBAC), and complex filter/sort interactions using React.js, Redux Toolkit, and RESTful APIs.
- GraphQL-Powered Frontend: Integrated Apollo Client with a GraphQL API to replace legacy REST calls, reducing over-fetching by 60% and significantly improving data load performance on a client-facing portal.
- React Component Design System: Architected a shared component library (forms, tables, modals, charts) with Tailwind CSS and Storybook, adopted across 5 client projects at Infinite Soft.
- MERN Stack Application Pipelines: Delivered end-to-end full-stack applications with React.js / Next.js frontends, Node.js/Express.js APIs, JWT authentication, and MongoDB with modular RESTful routing.
- AI-Accelerated Development: Used Cursor AI and Claude Code with structured prompt engineering to rapidly prototype and refactor React components, cutting initial build time for new feature spikes by 40%.

EDUCATION

Master of Science in Computer Science 2019 – 2021
Superior University, Lahore

Bachelor of Science in Computer Science 2017 – 2019
GC University, Faisalabad
